Preface

This preface is intended to provide an introduction to the enclosed reserve analysis as well as detailed information regarding the reserve analysis report format, reserve fund goals/objectives and calculation methods. The following sections are included in this preface:

♦ ♦ ♦ ♦ INTRODUCTION TO RESERVE BUDGETING ♦ ♦ ♦ ♦

The Board of Directors of an association has a legal and fiduciary duty to maintain the community in a good state of repair. Individual unit property values are significantly impacted by the level of maintenance and upkeep provided by the association as well as the amount of the regular assessment charged to each owner.

A prudent plan must be implemented to address the issues of long-range maintenance, repair and replacement of the common areas. Additionally, the plan should recognize that the value of each unit is affected by the amount of the regular assessment charged to each unit.

There is a fine line between “not enough,” “just right” and “too much.” Each member of an association should contribute to the reserve fund for their proportionate amount of “depreciation” (or “use”) of the reserve components. Through time, if each owner contributes his “fair share” into the reserve fund for the depreciation of the reserve components, then the possibility of large increases in regular assessments or special assessments will be minimized.

An accurate reserve analysis and a “healthy” reserve fund are essential to protect and maintain the association's common areas and the property values of the individual unit owners. A comprehensive reserve analysis is one of the most significant elements of any association's long-range plan and provides the critical link between sound business judgment and good fiscal planning. The reserve analysis provides a “financial blueprint” for the future of an association.

♦ ♦ ♦ ♦ UNDERSTANDING THE RESERVE ANALYSIS ♦ ♦ ♦ ♦

In order for the reserve analysis to be useful, it must be understandable by a variety of individuals. Board members (from seasoned, experienced Board members to new Board members), property managers, accountants, attorneys and even homeowners may ultimately review the reserve analysis. The reserve analysis must be detailed enough to provide a comprehensive analysis, yet simple enough to enable less experienced individuals to understand the results.

There are four key bits of information that a comprehensive reserve analysis should provide: Budget, Percent Funded, Projections and Inventory. This information is described as follows:

Budget
Amount recommended to be transferred into the reserve account for the fiscal year for which the reserve analysis was prepared. In some cases, the reserve analysis may present two or more funding plans based on different goals/objectives. The Board should have a clear understanding of the differences among these funding goals/objectives prior to implementing one of them in the annual budget.

Percent Funded
Measure of the reserve fund “health” (expressed as a percentage) as of the beginning of the fiscal year for which the

reserve analysis was prepared. This figure is the ratio of the actual reserve fund on hand to the fully funded balance. A reserve fund that is "100% funded" means the association has accumulated the proportionately correct amount of money, to date, for the reserve components it maintains.

Projections
Indicate the "level of service" the association will provide the membership as well as a "road map" for the fiscal future of the association. The projections define the timetables for repairs and replacements, such as when the buildings will be painted or when the asphalt will be seal coated. The projections also show the financial plan for the association – when an underfunded association will "catch up" or how a properly funded association will remain fiscally "healthy."

Inventory
Complete listing of the reserve components. Key bits of information are available for each reserve component, including placed-in-service date, useful life, remaining life, replacement year, quantity, current cost of replacement, future cost of replacement and analyst's comments.

♦ ♦ ♦ ♦ RESERVE FUNDING GOALS / OBJECTIVES ♦ ♦ ♦ ♦

There are four reserve funding goals/objectives which may be used to develop a reserve funding plan that corresponds with the risk tolerance of the association: Full Funding, Baseline Funding, Threshold Funding and Statutory Funding. These goals/objectives are described as follows:

Full Funding
Describes the goal/objective to have reserves on hand equivalent to the value of the deterioration of each reserve component. The objective of this funding goal is to achieve and/or maintain a 100% percent funded reserve fund. The component calculation method or cash flow calculation method is typically used to develop a full funding plan.

Baseline Funding
Describes the goal/objective to have sufficient reserves on hand to never completely run out of money. The objective of this funding goal is to simply pay for all reserve expenses as they come due without regard to the association's percent funded. The cash flow calculation method is typically used to develop a baseline funding plan.

Threshold Funding
Describes the goal/objective other than the 100% level (full funding) or just staying cash-positive (baseline funding). This threshold goal/objective may be a specific percent funded target or a cash balance target. Threshold funding is often a value chosen between full funding and baseline funding. The cash flow calculation method is typically used to develop a threshold funding plan.

Statutory Funding
Describes the pursuit of an objective as described or required by local laws or codes. The component calculation method or cash flow calculation method is typically used to develop a statutory funding plan.

♦ ♦ ♦ ♦ RESERVE FUNDING CALCULATION METHODS ♦ ♦ ♦ ♦

There are two funding methods which can be used to develop a reserve funding plan based on a reserve funding goal/objective: Component Calculation Method and Cash Flow Calculation Method. These calculation methods are described as follows:

Component Calculation Method
This calculation method develops a funding plan for each individual reserve component. The sum of the funding plan for each component equals the total funding plan for the association. This method is often referred to as the "straight line"

method and is widely believed to be the most conservative reserve funding method. This method structures a funding plan that enables the association to pay all reserve expenditures as they come due, enables the association to achieve the ideal level of reserves in time, and then enables the association to maintain the ideal level of reserves through time. The following is a detailed description of the component calculation method:

Step 1: Calculation of fully funded balance for each component

The fully funded balance is calculated for each component based on its age, useful life and current cost. The actual formula is as follows:

$$\text{Fully Funded Balance} = \frac{\text{Age}}{\text{Useful Life}} \text{ X Current Cost}$$

Step 2: Distribution of current reserve funds

The association's current reserve funds are assigned to (or distributed amongst) the reserve components based on each component's remaining life and fully funded balance as follows:

Pass 1: Components are organized in remaining life order, from least to greatest, and the current reserve funds are assigned to each component up to its fully funded balance, until reserves are exhausted.

Pass 2: If all components are assigned their fully funded balance and additional funds exist, they are assigned in a "second pass." Again, the components are organized in remaining life order, from least to greatest, and the remaining current reserve funds are assigned to each component up to its current cost, until reserves are exhausted.

Pass 3: If all components are assigned their current cost and additional funds exist, they are assigned in a "third pass." Components with a remaining life of zero years are assigned double their current cost.

Distributing, or assigning, the current reserve funds in this manner is the most efficient use of the funds on hand – it defers the make-up period of any underfunded reserves over the lives of the components with the largest remaining lives.

Step 3: Developing a funding plan

After step 2, all components have a "starting" balance. A calculation is made to determine what funding would be required to get from the starting balance to the future cost over the number of years remaining until replacement. The funding plan incorporates the annual contribution increase parameter to develop a "stair stepped" contribution.

For example, if an association needs to accumulate $100,000 in ten years, $10,000 could be contributed each year. Alternatively, the association could contribute $8,723 in the first year and increase the contribution by 3% each year thereafter until the tenth year.

In most cases, this rate should match the inflation parameter. Matching the annual contribution increase parameter to the inflation parameter indicates, in theory, that member contributions should increase at the same rate as the cost of living (inflation parameter). Due to the "time value of money," this creates the most equitable distribution of member contributions through time.

Using an annual contribution increase parameter that is greater than the inflation parameter will reduce the burden to the current membership at the expense of the future membership. Using an annual contribution increase parameter that is less than the inflation parameter will increase the burden to the current membership to the benefit of the future membership. The following chart shows a comparison:

	0% Increase	3% Increase	10% Increase
Year 1	$10,000.00	$8,723.05	$6,274.54
Year 2	$10,000.00	$8,984.74	$6,901.99
Year 3	$10,000.00	$9,254.28	$7,592.19
Year 4	$10,000.00	$9,531.91	$8,351.41
Year 5	$10,000.00	$9,817.87	$9,186.55
Year 6	$10,000.00	$10,112.41	$10,105.21
Year 7	$10,000.00	$10,415.78	$11,115.73
Year 8	$10,000.00	$10,728.25	$12,227.30
Year 9	$10,000.00	$11,050.10	$13,450.03
Year 10	$10,000.00	$11,381.60	$14,795.04
TOTAL	$100,000.00	$100,000.00	$100,000.00

This parameter is used to develop a funding plan only; it does not necessarily mean that the reserve contributions must be raised each year. There are far more significant factors that will contribute to a total reserve contribution increase or decrease from year to year than this parameter.

One of the major benefits of using this calculation method is that for any single component (or group of components), the accumulated balance and reserve funding can be precisely calculated. For example, using this calculation method, the reserve analysis can indicate the exact amount of current reserve funds "in the bank" for the roofs and the amount of money being funded towards the roofs each month. This information is displayed on the Management / Accounting Summary and Charts as well as elsewhere within the report.

Cash Flow Calculation Method

This calculation method develops a funding plan based on current reserve funds and projected expenditures during a specific timeframe (typically 30 years). This funding method structures a funding plan that enables the association to pay for all reserve expenditures as they come due, but is not necessarily concerned with the ideal level of reserves through time.

This calculation method tests reserve contributions against reserve expenditures through time to determine the minimum contribution necessary (baseline funding) or some other defined goal/objective (full funding, threshold funding or statutory funding). Unlike the component calculation method, this calculation method cannot precisely calculate the reserve funding for any single component (or group of components). In order to work-around this issue to provide this bookkeeping information, a formula has been applied to component method results to calculate a reasonable breakdown. This information is displayed on the Management / Accounting Summary and Charts as well as elsewhere within the report.

The **Directed Cash Flow Calculation Method** is our primary calculation method. It allows for several funding strategies to be manually tested until the optimal funding strategy accomplishing three goals is created:

Goal #1: Ensures that all scheduled reserve expenditures are covered by keeping the reserve cash balance above zero during the projected period (typically 30 years)

Goal #2: Uniformly distributes the costs of replacements over time to benefit both current & future members of the association by using consistent, incremental contribution increases

Goal #3: Provides for the lowest reserve funding recommendation as possible over time with the goal of approaching, reaching and/or maintaining a 100% fully funded reserve balance

These very important aspects of the **Directed Cash Flow Calculation Method** will greatly aid the board of directors during the annual budgeting process.

Preface

♦ ♦ ♦ ♦ READING THE RESERVE ANALYSIS ♦ ♦ ♦ ♦

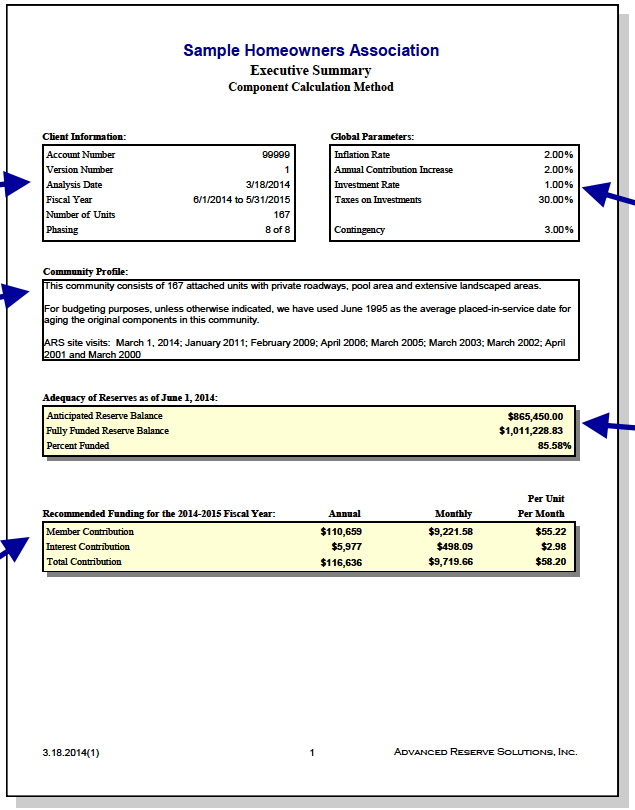
In some cases, the reserve analysis may be a lengthy document of one hundred pages or more. A complete and thorough review of the reserve analysis is always a good idea. However, if time is limited, it is suggested that a thorough review of the summary pages be made. If a "red flag" is raised in this review, the reader should then check the detail information, of the component in question, for all relevant information. In this section, a description of most of the summary or report sections is provided along with comments regarding what to look for and how to use each section.

Executive Summary

Provides general information about the client, global parameters used in the calculation of the reserve analysis as well as the core results of the reserve analysis.

Client Information
Provides various client information including fiscal year for which the reserve analysis was prepared, number of units, phasing, etc.

Global Parameters
Displays the calculation parameters that were used to calculate the reserve analysis including inflation, annual contribution increase, investment rate, tax rate and contingency.



Sample Homeowners Association
Executive Summary
Component Calculation Method

Client Information:

Account Number	99999
Version Number	1
Analysis Date	3/18/2014
Fiscal Year	6/1/2014 to 5/31/2015
Number of Units	167
Phasing	8 of 8

Global Parameters:

Inflation Rate	2.00%
Annual Contribution Increase	2.00%
Investment Rate	1.00%
Taxes on Investments	30.00%
Contingency	3.00%

Community Profile:

This community consists of 167 attached units with private roadways, pool area and extensive landscaped areas.

For budgeting purposes, unless otherwise indicated, we have used June 1995 as the average placed-in-service date for aging the original components in this community.

ARS site visits: March 1, 2014; January 2011; February 2009; April 2006; March 2005; March 2003; March 2002; April 2001 and March 2000

Adequacy of Reserves as of June 1, 2014:

Anticipated Reserve Balance	$865,450.00
Fully Funded Reserve Balance	$1,011,228.83
Percent Funded	85.58%

Recommended Funding for the 2014-2015 Fiscal Year:	Annual	Monthly	Per Unit Per Month
Member Contribution	$110,659	$9,221.58	$55.22
Interest Contribution	$5,977	$498.09	$2.98
Total Contribution	$116,636	$9,719.66	$58.20

3.18.2014(1) 1 Advanced Reserve Solutions, Inc.

Community Profile
Provides brief description of the community, as well as other "global" type comments.

Budget
Provides recommended funding for the fiscal year for which the reserve analysis was prepared. Indicates the reserve funding from the membership, anticipated interest contribution and the total contribution

Adequacy of Reserves
Displays the results of calculations with regard to the "health" of the reserve fund as of the beginning of the fiscal year for which the reserve analysis was prepared. Provides the anticipated reserve balance, fully funded reserve balance and the percent funded.

Preface

Calculation of Percent Funded

Summary displays all reserve components, shown here in "category" order. Provides the remaining life, useful life, current cost and the fully funded balance at the beginning of the fiscal year for which the reserve analysis was prepared.

Lifespans
Remaining life and useful life are displayed. And, these columns are conveniently sub totaled to show range.

Reserve Components
All components are displayed (shown here in "category" order).

Current Cost
Displays the current cost to replace or otherwise maintain each component. This column is conveniently sub totaled.

Fully Funded Balance
Displays the fully funded balance for each component. This column is conveniently sub totaled.

The total current cost to replace or otherwise maintain all components, total fully funded balance, anticipated reserve balance and percent funded are provided at the bottom of this summary. Also shown is the range of reserve component remaining lives and useful lives.

Preface

Management / Accounting Summary and Charts

Summary displays all reserve components, shown here in "category" order. Provides the assigned reserve funds at the beginning of the fiscal year for which the reserve analysis was prepared along with the monthly member contribution, interest contribution and total contribution for each component and category. Pie charts show graphically how the total reserve fund is distributed amongst the reserve component categories and how each category is funded on a monthly basis.

Balance at FYB
Shows the amount of reserve funds assigned to each reserve component. And, this column is conveniently sub totaled.

Monthly Funding
Displays the monthly funding for each component from the members and interest. Total monthly funding is also indicated. And, these columns are conveniently sub totaled.

Pie Charts
Show graphically how the reserve fund is distributed amongst the reserve components and how the components are funded.

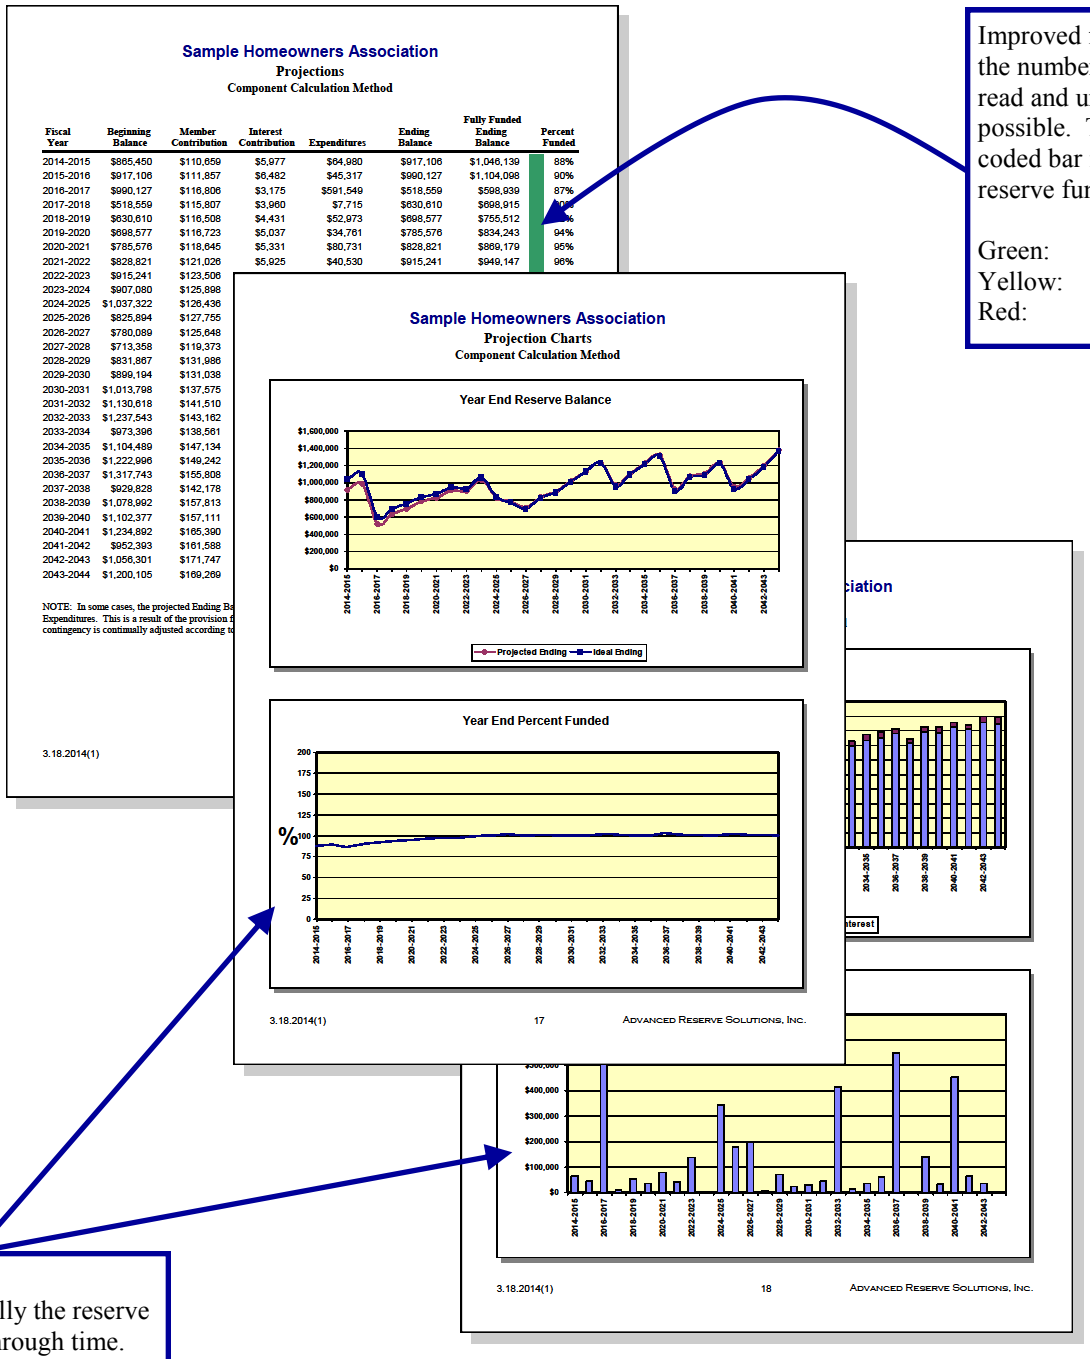
Preface

Projections and Charts

Summary displays projections of beginning reserve balance, member contribution, interest contribution, expenditures and ending reserve balance for each year of the projection period (shown here for 30 years). The two columns on the right-hand side provide the fully funded ending balance and the percent funded for each year. Charts show the same information in an easy-to-understand graphic format.



Improved format makes the numbers as easy to read and understand as possible. The color-coded bar indicates the reserve fund status:

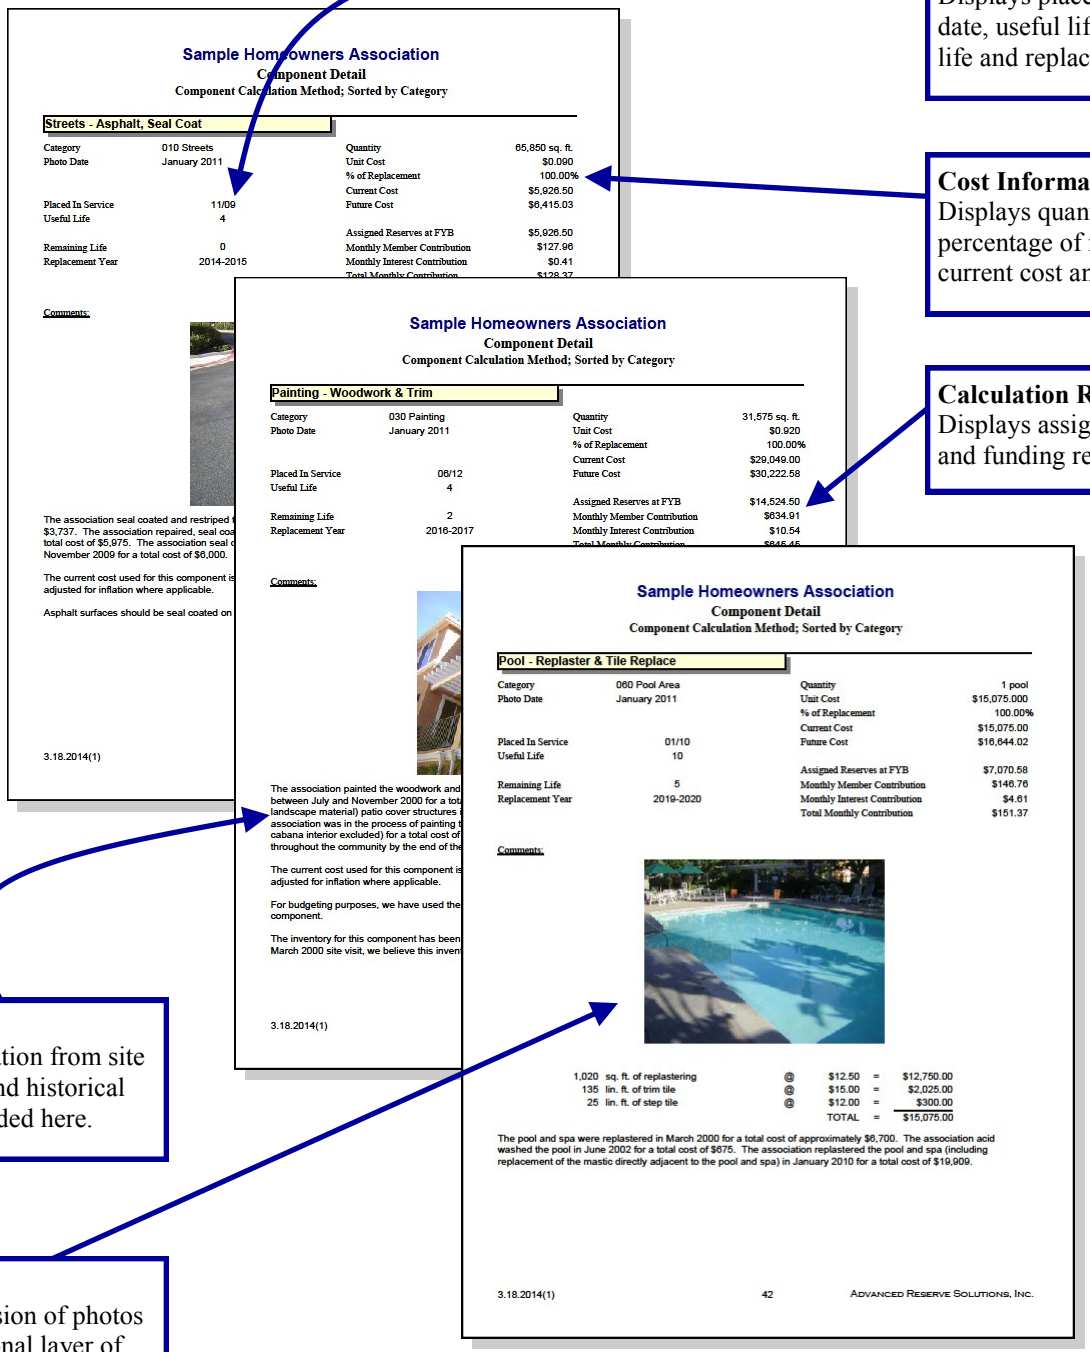
Green: Good
Yellow: Fair
Red: Poor

Charts
Show graphically the reserve funding plan through time.

Preface

Component Detail

Summary provides detailed information about each reserve component. These pages display all information about each reserve component as well as comments from site observations and historical information regarding replacement or other maintenance.



Lifespan Information
Displays placed-in-service date, useful life, remaining life and replacement year.

Cost Information
Displays quantity, unit cost, percentage of replacement, current cost and future cost.

Calculation Results
Displays assigned reserves and funding requirements.

Comments
Useful information from site observations and historical expenses included here.

Photos
Optional inclusion of photos adds an additional layer of detail to the reserve analysis.

Preface

♦ ♦ ♦ ♦ GLOSSARY OF KEY TERMS ♦ ♦ ♦ ♦

Annual Contribution Increase Parameter
The rate used in the calculation of the funding plan. This rate is used on an annual compounding basis. This rate represents, in theory, the rate the association expects to increase contributions each year.

In most cases, this rate should match the inflation parameter. Matching the annual contribution increase parameter to the inflation parameter indicates, in theory, that member contributions should increase at the same rate as the cost of living (inflation parameter). Due to the "time value of money," this creates the most equitable distribution of member contributions through time.

This parameter is used to develop a funding plan only; it does not necessarily mean that the reserve contributions must be raised each year. There are far more significant factors that will contribute to a total reserve contribution increase or decrease from year to year than this parameter. See the description of "reserve funding calculation methods" in this preface for more detail on this parameter.

Anticipated Reserve Balance (or Reserve Funds)
The amount of money, as of a certain point in time, held by the association to be used for the repair or replacement of reserve components. This figure is "anticipated" because it is calculated based on the most current financial information available as of the analysis date, which is almost always prior to the fiscal year beginning date for which the reserve analysis is prepared.

Assigned Funds (and "Fixed" Assigned Funds)
The amount of money, as of the fiscal year beginning date for which the reserve analysis is prepared, that a reserve component has been assigned.

The assigned funds are considered "fixed" when the normal calculation process is bypassed and a specific amount of money is assigned to a reserve component. For example, if the normal calculation process assigns $10,000 to the roofs, but the association would like to show $20,000 assigned to roofs, "fixed" funds of $20,000 can be assigned.

Cash Flow Calculation Method
Reserve funding calculation method developed based on total annual expenditures. A more detailed description of the actual calculation process is included in the "reserve funding calculation methods" section of the preface.

Component Calculation Method
Reserve funding calculation method developed based on each individual component. A more detailed description of the actual calculation process is included in the "reserve funding calculation methods" section of the preface.

Contingency Parameter
The rate used as a built-in buffer in the calculation of the funding plan. This rate will assign a percentage of the reserve funds, as of the fiscal year beginning, as contingency funds and will also determine the level of funding toward the contingency each month.

Current Replacement Cost
The amount of money, as of the fiscal year beginning date for which the reserve analysis is prepared, that a reserve component is expected to cost to replace.

Fiscal Year
Indicates the budget year for the association for which the reserve analysis was prepared. The fiscal year beginning (FYB) is the first day of the budget year; the fiscal year end (FYE) is the last day of the budget year.

Fully Funded Reserve Balance (or Ideal Reserves)
The amount of money that should theoretically have accumulated in the reserve fund as of a certain point in time. Fully funded reserves are calculated for each reserve component based on the current replacement cost, age and useful life:

$$\text{Fully Funded Reserves} = \frac{\text{Age}}{\text{Useful Life}} \times \text{Current Replacement Cost}$$

The fully funded reserve balance is the sum of the fully funded reserves for each reserve component.

An association that has accumulated the fully funded reserve balance does not have all of the funds necessary to replace all of its reserve components immediately; it has the proportionately appropriate reserve funds for the reserve components it maintains, based on each component's current replacement cost, age and useful life.

Future Replacement Cost
The amount of money, as of the fiscal year during which replacement of a reserve component is scheduled, that a reserve component is expected to cost to replace. This cost is calculated using the current replacement cost compounded annually by the inflation parameter.

Global Parameters
The financial parameters used to calculate the reserve analysis. See also "inflation parameter," "annual contribution increase parameter," "investment rate parameter" and "taxes on investments parameter."

Inflation Parameter
The rate used in the calculation of future costs for reserve components. This rate is used on an annual compounding basis. This rate represents the rate the association expects the cost of goods and services relating to their reserve components to increase each year.

Interest Contribution
The amount of money contributed to the reserve fund by the interest earned on the reserve fund and member contributions.

Investment Rate Parameter
The gross rate used in the calculation of interest contribution (interest earned) from the reserve balance and member contributions. This rate (net of the taxes on investments parameter) is used on a monthly compounding basis. This parameter represents the weighted average interest rate the association expects to earn on their reserve fund investments.

Membership Contribution
The amount of money contributed to the reserve fund by the association's membership.

Monthly Contribution (and "Fixed" Monthly Contribution)
The amount of money, for the fiscal year which the reserve analysis is prepared, that a reserve component will be funded.

The monthly contribution is considered "fixed" when the normal calculation process is bypassed and a specific amount of money is funded to a reserve component. For example, if the normal calculation process funds $1,000 to the roofs each month, but the association would like to show $500 funded to roofs each month, a "fixed" contribution of $500 can be assigned.

Number of Units (or other assessment basis)
Indicates the number of units for which the reserve analysis was prepared. In "phased" developments (see phasing), this number represents the number of units, and corresponding common area components, that existed as of a certain point in time.

For some associations, assessments and reserve contributions are based on a unit of measure other than the number of units. Examples include time-interval weeks for timeshare resorts or lot acreage for commercial/industrial developments.

One-Time Replacement
Used for components that will be budgeted for only once.

Percent Funded
A measure, expressed as a percentage, of the association's reserve fund "health" as of a certain point in time. This number is the ratio of the anticipated reserve fund balance to the fully funded reserve balance:

$$\text{Percent Funded} = \frac{\text{Anticipated Reserve Fund Balance}}{\text{Fully Funded Reserve Balance}}$$

An association that is 100% funded does not have all of the reserve funds necessary to replace all of its reserve components immediately; it has the proportionately appropriate reserve funds for the reserve components it maintains, based on each component's current replacement cost, age and useful life.

Percentage of Replacement
The percentage of the reserve component that is expected to be replaced.

For most reserve components, this percentage should be 100%. In some cases, this percentage may be more or less than 100%. For example, fencing which is shared with a neighboring community may be set at 50%.

Phasing
Indicates the number of phases for which the reserve analysis was prepared and the total number of phases expected at build-out (i.e. Phase 4 of 7). In phased developments, the first number represents the number of phases, and corresponding common area components, that existed as of a certain point in time. The second number represents the number of phases that are expected to exist at build-out.

Placed-In-Service Date
The date (month and year) that the reserve component was originally put into service or last replaced.

Remaining Life
The length of time, in years, until a reserve component is scheduled to be replaced.

Remaining Life Adjustment
The length of time, in years, that a reserve component is expected to last in excess (or deficiency) of its useful life for the current cycle of replacement.

If the current cycle of replacement for a reserve component is expected to be greater than or less than the "normal" life expectancy, the reserve component's life should be adjusted using a remaining life adjustment.

For example, if wood trim is painted normally on a 4 year cycle, the useful life should be 4 years. However, when it comes time to paint the wood trim and it is determined that it can be deferred for an additional year, the useful life should remain at 4 years and a remaining life adjustment of +1 year should be used.

Replacement Year
The fiscal year that a reserve component is scheduled to be replaced.

Reserve Components
Line items included in the reserve analysis.

Taxes on Investments Parameter
The rate used to offset the investment rate parameter in the calculation of the interest contribution. This parameter represents the marginal tax rate the association expects to pay on interest earned by the reserve funds and member contributions.

Total Contribution
The sum of the membership contribution and interest contribution.

Useful Life
The length of time, in years, that a reserve component is expected to last each time it is replaced. See also "remaining life adjustment."

♦ ♦ ♦ ♦ LIMITATIONS OF RESERVE ANALYSIS ♦ ♦ ♦ ♦

This reserve analysis is intended as a tool for the association's Board of Directors to be used in evaluating the association's current physical and financial condition with regard to reserve components. The results of this reserve analysis represent the independent opinion of the preparer. There is no implied warranty or guarantee of this work product.

For the purposes of this reserve analysis, it has been assumed that all components have been installed properly, no construction defects exist and all components are operational. Additionally, it has been assumed that all components will be maintained properly in the future.

The representations set forth in this reserve analysis are based on the best information and estimates of the preparer as of the date of this analysis. These estimates are subject to change. This reserve analysis includes estimates of replacement costs and life expectancies as well as assumptions regarding future events. Some estimates are projections of future events based on information currently available and are not necessarily indicative of the actual future outcome. The longer the time period between the estimate and the estimated event, the more likely the possibility or error and/or discrepancy. For example, some assumptions inevitably will not materialize and unanticipated events and circumstances may occur subsequent to the preparation of this reserve analysis. Therefore, the actual replacement costs and remaining lives may vary from this reserve analysis and the variation may be significant. Additionally, inflation and other economic events may impact this reserve analysis, particularly over an extended period of time and those events could have a significant and negative impact on the accuracy of this reserve analysis and, further, the funds available to meet the association's obligation for repair, replacement or other maintenance of major components during their estimated useful life. Furthermore, the occurrence of vandalism, severe weather conditions, earthquakes, floods, acts of nature or other unforeseen events cannot be predicted and/or accounted for and are excluded when assessing life expectancy, repair and/or replacement costs of the components.

Client Information

Account Number	4090
Version Number	004 (revised)
Analysis Date	5/17/2024
Fiscal Year	1/1/2024 to 12/31/2024
Number of Property	1

Global Parameters

Inflation Rate	3.00%
Annual Contribution Increase	3.30%
Investment Rate	1.82%
Taxes on Investments	0.00%
Contingency	0.00%

Community Profile

This property was built as apartments in 1999, and was converted to condominiums in 2004/2005. Refer to the Component Detail section for the dates used to age the components examined in this analysis.

The January 1, 2024 reserve balance is $907,795.85.

The client's 2024 budgeted reserve contribution is $431,130. In 2024, $18,500 worth of Grant Reimbursement Funds will be received from the master association to help fund a surveillance system project. Therefore, the total 2024 reserve contribution is anticipated to be $449,630.

REPORTS: 2016. Updated 2018, 2021 & 2023.

Adequacy of Reserves as of January 1, 2024

		Total Monthly Contribution	$5,487.29

The client requested that we budget to remove & repave the community asphalt over a three year period (2029, 2030 & 2031). However, this request was made so that it would give them more time to fund this project. Therefore, instead of scheduling this project to be done over a three year period of time, we have decided to schedule it to occur in 2031. This will give the client the maximum amount of time needed to fund the project, and will allow them to use the accumulated funds on an "as needed" basis should they actually decide to do this project 1/3 at a time over a three year period.

NOTE: We have decided to budget for the remove & repave as indicated above because it doesn't make any sense to spread this type of a project out over a three year period of time. This is a project that should be done all at once in order to get the best possible pricing, and to complete this type of project in as short a period of time to avoid significant & repeating disruptions to the community.

		Current Cost	$50,000.00
Placed In Service	05/2018	Future Cost	$56,275.44
Useful Life	4		
		Assigned Reserves at FYB	$50,000.00
Remaining Life	0	Monthly Member Contribution	$661.18
Replacement Year	2024	Monthly Interest Contribution	$7.59
		Total Monthly Contribution	$668.78

Historical Asphalt Maintenance Expenditures:

2012: seal coat

2017: skin patching & removal/replacement ($67,913)

2018: crack seal, seal coat & restripe ($22,227)

Going forward, the client has advised us to budget $50,000 for asphalt repairs, crack sealing, seal coating & restriping in 2024, and then on a four year cycle.

It should be noted that the repair/seal coat and rehabilitation assets are budgeted to occur in the same budget year. It is recommended that the asphalt be seal coated within 6 months of rehabilitation. Therefore, this component appears in the same year as the rehabilitation project. If the Association chooses not to seal coat within 6 months of rehabilitation, the accumulated funds can be used for any additional expenses associated with the rehabilitation, or remain in the reserve account to be reallocated to other future projects.

Roofs: A/C Equipment Wells, Reroof (2035)

Category	020 Roofing	Quantity	1 total
		Unit Cost	$526,980.00
		% of Replacement	33.33%
		Current Cost	$175,642.43
Placed In Service	01/1999	Future Cost	$243,130.21
Useful Life	25		
Adjustment	+11	Assigned Reserves at FYB	$0.00
Remaining Life	11	Monthly Member Contribution	$893.82
Replacement Year	2035	Monthly Interest Contribution	$10.27
		Total Monthly Contribution	$904.09

There are 104 flat, A/C equipment well roofs atop various buildings. In 2012/2013, 92 of the flat, A/C equipment well roofs were cleaned, repaired and received a new, silicone top coat application. In 2016, similar work was done to the other 12 equipment well roofs.

In 2023, Red Mountain Roofing advised the client that the silicone coating on these roofs can't be recoated, so they provided to them a bid to reroof with smooth 60-mil TPO membranes at a cost of $526,980 (see bid for details on the specific scope of work & warranty). The client has advised us that these roofs have been inspected, are in good condition, and aren't leaking. Therefore, they have advised us to budget to reroof 1/3 of the flat, equipment well roofs in 2035, and then on a 25 year cycle.

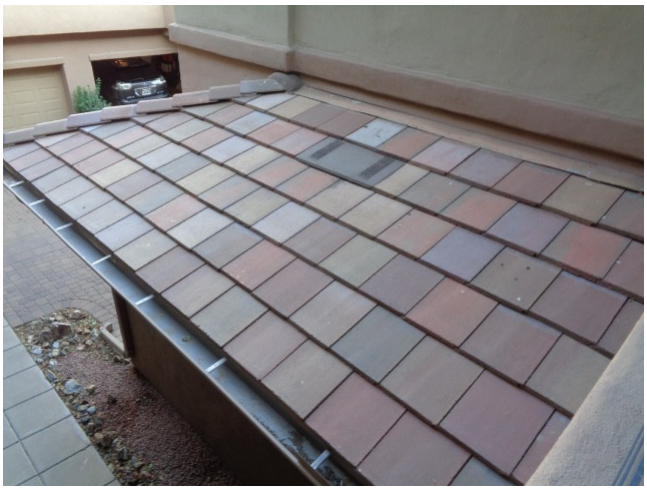
Remaining Life	4	Monthly Member Contribution	$330.59
Replacement Year	2028	Monthly Interest Contribution	$3.80
		Total Monthly Contribution	$334.39



In 2023, the client will complete a community-wide tile roof underlayment replacement project. Going forward, this component includes a provision every five years for tile roof maintenance (replace broken tiles or missing tiles, resecure loose tiles, etc.).

Venu at Grayhawk Condominium Association

Component Detail

Directed Cash Flow Calculation Method; Sorted By Category

Roofs: Tile Underlayment Replacement

Category	020 Roofing	Quantity	1 total
		Unit Cost	$1,922,900.00
		% of Replacement	100.00%
		Current Cost	$1,922,900.00
Placed In Service	01/2023	Future Cost	$4,531,439.81
Useful Life	30		
		Assigned Reserves at FYB	$0.00
Remaining Life	29	Monthly Member Contribution	$4,290.35
Replacement Year	2053	Monthly Interest Contribution	$49.28
		Total Monthly Contribution	$4,339.63

There is approximately 340,000 sq. ft. of tile roofing/underlayment atop the 42 condominium buildings & Great Room. The client started a tile roof underlayment replacement project with Red Mountain Roofing (20 year material warranty for two layers of 40lb underlayment) in 2021, and will complete the project in late 2023. For budgeting purposes we have used January 2023 as an average placed in service date for the tile roof underlayment. The tile roof inventory includes:

Type 1 Buildings: 13 condominium buildings @ $48,000 per building (2023 cost)
Type 2 Buildings: 17 condominium buildings @ $63,700 per building (2023 cost)
Type 3 Buildings: 1 Great Room building @ $48,000 (2023 cost)
Type 4 Buildings: 12 condominium buildings @ $14,000 per building (2023 cost)

This component budgets to replace the tile roof underlayment on a 30 year cycle going forward.

Walk Decks: Recoat (A)

Lighting: Wall Mounted Lantern Fixtures

Category	050 Lighting	Quantity	644 fixtures
		Unit Cost	$115.00
		% of Replacement	100.00%
		Current Cost	$74,060.00
Placed In Service	01/1999	Future Cost	$99,530.45
Useful Life	25		
Adjustment	+10	Assigned Reserves at FYB	$0.00
Remaining Life	10	Monthly Member Contribution	$411.23
Replacement Year	2034	Monthly Interest Contribution	$4.72
		Total Monthly Contribution	$415.96

This component budgets to replace the wall mounted fixtures on the condominium buildings, Great Room & back pool building. The useful life adjustment was provided by the client.

Front Pool: Access Control System

Category	060 Front Pool & Spa	Quantity	1 total
		Unit Cost	$8,500.00
		% of Replacement	100.00%
		Current Cost	$8,500.00
Placed In Service	05/2021	Future Cost	$10,453.93
Useful Life	10		
		Assigned Reserves at FYB	$0.00
Remaining Life	7	Monthly Member Contribution	$65.81
Replacement Year	2031	Monthly Interest Contribution	$0.76
		Total Monthly Contribution	$66.56

An access control system was installed at the front pool area in 2021 at a cost of $11,146.33. This component will accumulate funds on a 10 year cycle for equipment replacements associated with this system on an "as needed" basis.

Front Pool: Deck Recoat

Category	060 Front Pool & Spa	Quantity	6,760 sq. ft.
		Unit Cost	$1.75
		% of Replacement	100.00%
		Current Cost	$11,830.00
Placed In Service	08/2020	Future Cost	$13,314.77
Useful Life	4		
Adjustment	+4	Assigned Reserves at FYB	$0.00
Remaining Life	4	Monthly Member Contribution	$156.44
Replacement Year	2028	Monthly Interest Contribution	$1.80
		Total Monthly Contribution	$158.23

As requested by the client, this component budgets to repair and recoat (repaint) the front pool deck in 2028, and then on a continuous four year cycle.

NOTE: In the year that the recoat & resurface projects coincide, the funds available from this component are to be combined with the funds from the resurface component in order to fund the resurfacing project.

Front Pool: Deck Resurface

Category	060 Front Pool & Spa	Quantity	6,760 sq. ft.
		Unit Cost	$5.75
		% of Replacement	100.00%
		Current Cost	$38,870.00
Placed In Service	08/2020	Future Cost	$49,239.35
Useful Life	12		
		Assigned Reserves at FYB	$0.00
Remaining Life	8	Monthly Member Contribution	$265.46
Replacement Year	2032	Monthly Interest Contribution	$3.05
		Total Monthly Contribution	$268.51

The front pool acrylic deck surface was machine stripped & resurfaced in September 2014 at a cost of $41,933.79, and again in August 2020 at a cost of $39,235. This component budgets for similar work every 12 years. The coating/coloring of the deck following the resurfacing is accounted for in the "Front Pool: Deck Recoat" component.

Front Pool: Drinking Fountain

Category	060 Front Pool & Spa	Quantity	1 drinking fountain
		Unit Cost	$1,250.00
		% of Replacement	100.00%
		Current Cost	$1,250.00
Placed In Service	01/2016	Future Cost	$1,537.34
Useful Life	15		
		Assigned Reserves at FYB	$0.00
Remaining Life	7	Monthly Member Contribution	$9.68
Replacement Year	2031	Monthly Interest Contribution	$0.11
		Total Monthly Contribution	$9.79

This Elkay drinking fountain is wall mounted to the Great Room building.

Pools & Spas: Furniture

Category	062 Pools & Spas
Placed In Service	05/2023
Useful Life	5
Adjustment	-3
Remaining Life	1
Replacement Year	2025

Quantity	1 total
Unit Cost	$56,000.00
% of Replacement	100.00%
Current Cost	$56,000.00
Future Cost	$57,680.00
Assigned Reserves at FYB	$22,400.00
Monthly Member Contribution	$1,747.61
Monthly Interest Contribution	$48.53
Total Monthly Contribution	$1,796.14

There is a significant amount of furniture at the front pool area, back pool area & Great Room back patio (various types of chaise lounges, chairs, tea tables, dining tables, stools, day beds sofas, love seats, umbrellas, etc.). The majority of this furniture is 10 - 15 years old. In 2021, +/- $31,000 was spent on new cushions, new curtains, reupholstering, replacing chaise lounge fabric, replacing umbrellas, etc. In 2022, new sling chaise lounges (20) & chairs (12) were purchased for the front pool area ($11,148.83). In 2023, new sling chaise lounges (10) were purchased for the back pool area ($4,793.30). Going forward, this component budgets $56,000 (per the client), every five years (next in 2025 per the client), for the refurbishment and/or replacement of the furniture on an "as needed" basis.

NOTE: The accumulated funds for this component should also be used to replace the fabric cover top the main pool/spa equipment enclosure.

This is a GE, model #GDT655SJ0SS dishwasher in the bar area.

Great Room: Furniture (Replace)

Category	075 Great Room
Placed In Service	01/2017
Useful Life	16
Remaining Life	9
Replacement Year	2033

Quantity	1 total
Unit Cost	$80,000.00
% of Replacement	100.00%
Current Cost	$80,000.00
Future Cost	$104,381.85
Assigned Reserves at FYB	$0.00
Monthly Member Contribution	$489.60
Monthly Interest Contribution	$5.62
Total Monthly Contribution	$495.22

$60,000 was spent in late 2016 to replace the Great Room furniture as part of the remodel project. In late 2021, six of the nine barstools were reupholstered at a cost of $1,530. In 2022, the dining room chairs were replaced with leather chairs at a cost of $4,013.62. For budgeting purposes we have continued to use 2017 as the basis for aging this component since the majority of the furniture remains the same. This component budgets to replace the Great Room furniture on a 16 year cycle. The accumulated funds should continue to be used on an "as needed" basis for furniture refurbishments & interim replacements.

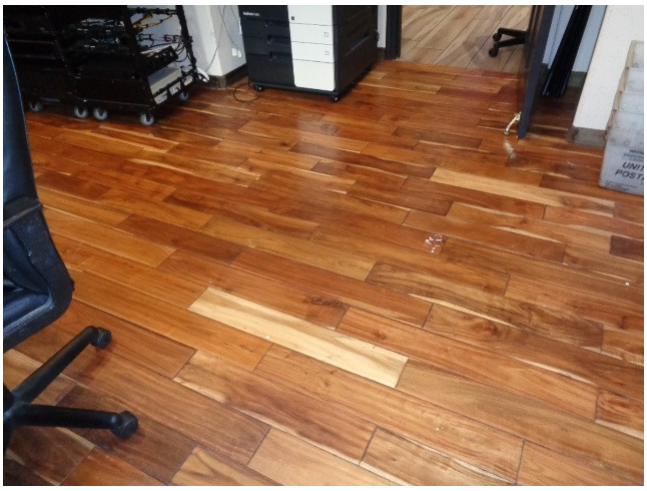
Great Room: Remodel Provision

Category	075 Great Room
Placed In Service	01/2022
Useful Life	10
Remaining Life	8
Replacement Year	2032

Quantity	1 total
Unit Cost	$60,000.00
% of Replacement	100.00%
Current Cost	$60,000.00
Future Cost	$76,006.20
Assigned Reserves at FYB	$0.00
Monthly Member Contribution	$409.77
Monthly Interest Contribution	$4.71
Total Monthly Contribution	$414.48



A remodel project took place in the Great Room in late 2016 that included interior painting, game room carpet, main room tile flooring, installation of decorative ceiling wood, new furniture, some new countertops, a new oven/range, etc.

The pool table was recovered in June 2021 at a cost of $779.14, and a new window was purchased/installed in August 2020 at a cost of $2,751.95.

A kitchen & storage room remodel project ($18,508.30) took place in 2022 that included the removal of the back cabinets

& sink, some replumbing, the installation of a new 3 bay sink & handwashing sink, new flooring in the storage area, a new mop sink, some painting & a new tankless water heating system.

Going forward, this component will accumulate funds on a 10 year cycle for improvements/replacements and/or remodeling of the Great Room components not individually listed in this report. The accumulated funds should be used on an "as needed" basis for: floor cover not listed, tanning booth in gym, cabinents & counter tops not removed/replaced, plumbing fixtures, pool table refurbishment/replacement, window & door replacements, wallpaper, water heater, lighting, window coverings, pool area restrooms, ceiling fans & general décor. The budgeted amount & useful life cycle will need to be adjusted over time as condition & experience dictates.

Great Room: Telephone System

Category	075 Great Room	Quantity	1 total
		Unit Cost	$2,000.00
		% of Replacement	100.00%
		Current Cost	$2,000.00

		Total Monthly Contribution	$0.00

The following comments apply to the concrete pavers making up several drive areas within the property:

Pavers are typically constructed with 1" of sand over a 3" base of ABC, and are usually 2 3/5" to 3 1/8" thick. Due to the construction and type of material used, the pavers are anticipated to last indefinitely, assuming they were properly installed. It is anticipated that any repairs required will be addressed immediately using operating funds. Good maintenance practice won't allow the need for repairs to accumulate to a point of major expense.

Grounds: Concrete Repairs/Replacements

Category	100 Grounds	Quantity	1 total
		Unit Cost	$22,500.00
		% of Replacement	100.00%
		Current Cost	$22,500.00
Placed In Service	08/2020	Future Cost	$23,175.00
Useful Life	5		
		Assigned Reserves at FYB	$17,405.66
Remaining Life	1	Monthly Member Contribution	$273.15
Replacement Year	2025	Monthly Interest Contribution	$25.25
		Total Monthly Contribution	$298.40

In 2016, we were advised by the client to budget the following for concrete repairs/replacements:

$20,000, every five years, next in 2021

In 2017, roughly $10,000 was spent on concrete replacements.

In August 2020, $6,136.50 was spent on concrete trip hazard removals, and another $3,364.00 was spent on concrete curb repair/replacement.

No concrete related expenses were reported to have been done in 2022 & 2023. For budgeting purposes we have continued to use a placed in service date of August 2020 for this component. The budgeted amount has been adjusted for inflation.

Grounds: Directory Map (Refurbish)

Category	100 Grounds	Quantity	1 total
		Unit Cost	$1,850.00
		% of Replacement	100.00%
		Current Cost	$1,850.00
Placed In Service	07/2020	Future Cost	$2,560.83
Useful Life	15		
		Assigned Reserves at FYB	$0.00
Remaining Life	11	Monthly Member Contribution	$9.41
Replacement Year	2035	Monthly Interest Contribution	$0.11
		Total Monthly Contribution	$9.52

$1,507.80 was spent in mid-2020 to refurbish the directory map (change to LED internal illumination, paint map box, new digital printing & artwork) located next to the monument sign.

Grounds: Fabric Shade Covers (Trash Encls)

Category	100 Grounds	Quantity	1 total
		Unit Cost	$35,000.00
		% of Replacement	100.00%
		Current Cost	$35,000.00
Placed In Service	01/2019	Future Cost	$43,045.59
Useful Life	12		
		Assigned Reserves at FYB	$0.00
Remaining Life	7	Monthly Member Contribution	$270.98
Replacement Year	2031	Monthly Interest Contribution	$3.11
		Total Monthly Contribution	$274.09

This component budgets to replace the following fabric shade covers - the accumulated funds should be used on an "as needed" basis:

18 - trash enclosures (215 sq. ft. each)
1 - trash enclosure (311 sq. ft.)

Grounds: Garage Doors (Maintenance Areas)

Category	100 Grounds	Quantity	1 total
		Unit Cost	$1,800.00
		% of Replacement	100.00%
		Current Cost	$1,800.00
Placed In Service	01/2021	Future Cost	$2,975.13
Useful Life	20		
		Assigned Reserves at FYB	$0.00
Remaining Life	17	Monthly Member Contribution	$6.22
Replacement Year	2041	Monthly Interest Contribution	$0.07
		Total Monthly Contribution	$6.29

$1,575 was spent in 2021 to replace the single car, metal sectional garage doors for the two maintenance areas (#122 & #124).

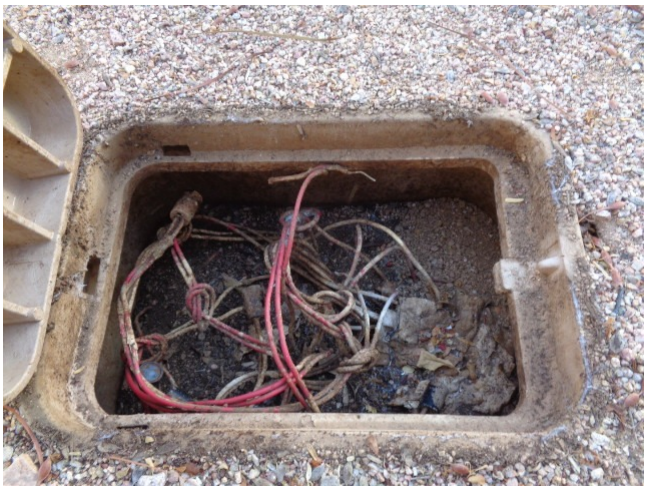
Grounds: Granite Replenishment

Category	100 Grounds	Quantity	1 total
		Unit Cost	$18,500.00
		% of Replacement	100.00%
		Current Cost	$18,500.00
Placed In Service	05/2023	Future Cost	$19,055.00
Useful Life	1		
Adjustment	+1	Assigned Reserves at FYB	$7,400.00
Remaining Life	1	Monthly Member Contribution	$577.34
Replacement Year	2025	Monthly Interest Contribution	$16.03
		Total Monthly Contribution	$593.37

Granite replenishment last occurred in early-mid 2023. Going forward, the client has advised us to budget for granite replenishment annually, with the next expenditure scheduled to occur in 2025.

Grounds: Irrigation System Replacement

Category	100 Grounds	Quantity	1 total
		Unit Cost	$155,000.00
		% of Replacement	100.00%
		Current Cost	$155,000.00
Placed In Service	01/2018	Future Cost	$234,451.41
Useful Life	20		
		Assigned Reserves at FYB	$0.00
Remaining Life	14	Monthly Member Contribution	$634.95
Replacement Year	2038	Monthly Interest Contribution	$7.29
		Total Monthly Contribution	$642.24



$124,089.79 was spent in early 2018 to replace the irrigation system (see the Desert Classic Landscaping bid dated November 1, 2017). This component budgets for similar work every 20 years.

Grounds: Mailboxes (2024)

Category	100 Grounds	Quantity	10 mailbox sets
		Unit Cost	$3,660.00
		% of Replacement	100.00%
		Current Cost	$36,600.00
Placed In Service	01/1999	Future Cost	
Useful Life	25		
		Assigned Reserves at FYB	$36,600.00
Remaining Life	0	Monthly Member Contribution	$0.00
Replacement Year	2024	Monthly Interest Contribution	$0.00
	One-Time Replacement	Total Monthly Contribution	$0.00

The wall mounted mailbox sets are located at the Great Room & back pool building. In 2023, two mailbox sets (5 x 7 box sets, 1 at each location) were replaced at a cost of $3,660 each. This component is a one time expense in 2024 to replace the rest of the original wall mounted mailbox sets:

1 - 4 x 7 box set
9 - 5 x 7 box sets

Grounds: Mailboxes (Ongoing)

Category	100 Grounds	Quantity	12 mailbox sets
		Unit Cost	$3,660.00
		% of Replacement	100.00%
		Current Cost	$43,920.00
Placed In Service	01/2024	Future Cost	$91,958.73
Useful Life	25		
		Assigned Reserves at FYB	$0.00
Remaining Life	25	Monthly Member Contribution	$110.08
Replacement Year	2049	Monthly Interest Contribution	$1.26
		Total Monthly Contribution	$111.35

The wall mounted mailbox sets are located at the Great Room & back pool building. In 2023, two mailbox sets (5 x 7 box sets, 1 at each location) were replaced at a cost of $3,660 each. We are budgeting to replace the rest of the original wall mounted mailbox sets in 2024. This component budgets for future/ongoing mailbox replacement cycles. The total inventory includes:

1 - 4 x 7 box set
11 - 5 x 7 box sets

Grounds: Monument Sign Letters (Unfunded)

Category	100 Grounds	Quantity	1 comment
		Unit Cost	$0.00
		% of Replacement	0.00%
		Current Cost	$0.00
Placed In Service	01/1999	Future Cost	$0.00
Useful Life	n.a.		
		Assigned Reserves at FYB	$0.00
Remaining Life	n.a.	Monthly Member Contribution	$0.00
Replacement Year	n.a.	Monthly Interest Contribution	$0.00
		Total Monthly Contribution	$0.00

The double-sided monument sign indicates "VENU AT GRAYHAWK 19777".

We are not budgeting to replace the steel letters making up the monument sign because they should last indefinitely under normal circumstances. Any necessary repairs should be handled on an "as needed" basis using operating funds. Should the client wish to budget for the replacement of the steel letters for aesthetic/remodeling purposes, we will do so at their request.

Grounds: Rip Rap Replenish & Plant Replacement

Category	100 Grounds	Quantity	1 total
		Unit Cost	$20,000.00
		% of Replacement	100.00%
		Current Cost	$20,000.00
Placed In Service	07/2022	Future Cost	$21,854.54
Useful Life	5		
		Assigned Reserves at FYB	$0.00
Remaining Life	3	Monthly Member Contribution	$349.78
Replacement Year	2027	Monthly Interest Contribution	$4.02
		Total Monthly Contribution	$353.80

$19,746 was spent in mid-2022 to replenish rip rap along the sidewalk, BBQ, and some wall areas to minimize erosion, and new plants were installed along the sidewalk where they were missing. As directed by the client, this component includes a provision for similar work every five (5) years.
